Dr Sanish Davis Appointed as President of ISCR

Appointment at a time when patient-centricity, digital adoption and collaboration grow in importance

India, April 1, 2021: The Indian Society for Clinical Research (ISCR), an association of clinical research professionals, has announced the appointment of Dr. Sanish Davis as its President for the term 2021-23. Dr. Sanish takes over from Dr. Chirag Trivedi, who was President for two terms from 2017-2021.

Commenting on his focus at a time when clinical research has been a lot in the focus due to the COVID-19 pandemic, Dr. Sanish Davis said, "I am delighted to lead ISCR at a very critical juncture for clinical trials in India. The lessons from clinical trials during the pandemic will act as a catalyst to transform how we do clinical trials in the future and I am excited about the possibilities. While patient centricity and ethical, safe clinical trials will continue to be our focus, we will increase our focus on digital adoption in clinical trials and greater collaboration among all stakeholders. We will continue to build on our collaboration with patients, ethics committees, investigators and the regulatory agency in order to bring medicines for unmet medical needs faster. The general public is now far more aware of the relevance of clinical trials and we need to build on this to ensure greater appreciation of and recognition for clinical research in India. I thank Dr Trivedi and our outgoing Executive Committee and Council/Chapter Heads for their contribution to leading ISCR the last four years."

Dr. Davis, who holds a degree in Clinical Pharmacology from Seth GS Medical College, has around 15 years of experience in the clinical research industry with leading Indian and multinational organisations.

About ISCR

The Indian Society for Clinical Research (ISCR) is an association of clinical research professionals that aims to build awareness of clinical research as a speciality in India and to facilitate its growth in the country while helping to evolve the highest standards of quality and ethics. To that extent, we are fully supportive of the initiatives undertaken by regulatory authorities to create a more robust and regulated environment in India for the conduct of clinical research and will continue to work very closely with different stakeholders in the development of regulations that will safeguard and protect patients in a clinical trial.
